Align QR code within frame

Wayfinding Start

Scan the marker located on the orientation totem to calibrate your AR view.

Position Lost

We've lost track of your precise location in the environment. Please follow these steps to recalibrate.

STEP 01

Find a QR Code

Look for the nearest navigation anchor sticker on a wall or floor pillar.

STEP 02

Scan the Code

Point your camera directly at the code until it registers on screen.

STEP 03

Resume Navigation

PRO TIP
Keep the camera steady for 2 seconds.

Help us guide better

Your insights refine the NavAR precision for everyone.

Submit Feedback ➤

By submitting, you help improve our spatial engine. Data is handled per our Privacy Policy.

Enable Camera for AR

Camera access is essential for real-time indoor navigation overlays. We use the lens to scan your surroundings and place digital waypoints directly in your path.

ALLOW CAMERA

Not Now

Your camera feed is processed locally and is never stored on our servers.

Pro tip: Hold your phone upright for the most accurate spatial tracking.
